Approved For Release 2001/03/05 : CIA-RDP82-00457R000100240006-29 Document To. NG MANGE in Class DECI DNICIDENTI SECRET 25X1A CONTROL Date: CENTRAL INTELLIGENCE GROUP 6 INTELLIGENCE REPORT Germany/Russian Zone COUNTRY 25X1X6 DATE: INFO. Telefunken, Berlin, Working for the Russians SUBJECT DIST. 13 November 1946 25X1A6a BAGES This document is hereby regree 2 1978 from the PPLEMENT CONFIDENTIAL in accor ORIGIN letter of 16 Octob 25X1X6 contral Intelligence to the 1. At the moment, the Telefunken plant is producing exclusively for the Russian Army. Because of shortages of material, the production plans have been changed very often by the Russians. At present the following is being produced: Radio Tubes Planned Production Actual Production January 1946 60,000 pieces 15,000 pieces February 60,000 18,000 March 60,000 12,000 Total: 180,000 pieces 45,000 pieces April 20,000 pieces 6,000 pieces May 25,000 13,000 June 25,000 20,000 Total: 70,000 pieces 39,000 pieces July 30,000 pieces 11,000 pieces August 35,000 22,000 September 54,000 about 20,000

As a result of lack of materials only AZ I and AZ II tubes are being produced. It is planned to produce types ECH 11, ECL 11, EBF 11, EB 11, EC 2, EDD 11, EF 7, EF 11, but it is impossible to produce them at this moment. There is not only a lack of wolfram- and molybdenum wire, of which Osram-Berlin delivers only ten percent of the requested amount, but also of chemicals, such as acetone and acetic acid, etc. Furthermore, because of urgent Russian orders, the LKVO - Berlin Oberschöneweide is not able any more to deliver the cathodes and burners necessary for the tube production. The latter have to be produced by Telefunken itself, which results in additional delay of the production plans. By order of the Russians, several sections of the tube plant [such as the degasifying section and the test floor (Priffeld)] have to

119,000 pieces

195,000 pieces.

about 53,000 pieces

work in three shifts

2. Portable amplifiers.

These are portable amplifiers for sound film similar to the "Klangfilm-Koffer". They will be used by the Soviet Army. The production plans called for 10,000 sets; the actual production was as follows:

January	100 sets
February	150 "
March	200 "
April ·	400 "
May .	400 "
June	500 "
July	500 "
August	500 "

The order first met with difficulties because of material shortages, but the Russian solved this by taking material from other firms.

3. Water-cooled transmitting tubes.

The Soviet Army had ordered 2500 of these tubes, ranging from the smallest to the largest type. Because of lack of material and skilled workers, this order could not be filled as yet; only eight tubes, type RS 215, have been produced to date, at the price of RM. 1100. To speed up this production the Russianshired on SS Sturmführer who, in the course of denazification, had been fired by Telefunken.

40 High frequency measuring instruments.

An order of about RM 450,000 was placed by LKVO-Berlin-Oberschöneweide, for which the Russians try to get the necessary materal from other firms.

5. Measuring instruments for Air Corps testing fields (Luftwaffenprüffelder).

The Russian Air Limistry, through SMA Karlshorst, placed a 4.5 million mark order for measuring bridges, aklirrfaktormesser, tube-voltmeters, Rauschdieden (two electrode tubes), etc. This order was handled very secretly and received priority over everything, even the tube production. Mr. Juettner, a civilian Russian engineer, came to the works especially to direct fulfillment of this order. There are two more Russian officials in control; Colonel Jessipoff and 1st Lt. Novikoff. The Russians demanded from Telefunken, arfurt, a list of all German firms which produced communication apparatus, including those in the western zones, and of those which made parts.

6. An order for repairing Russian military transmitting and receiving sets, which had been placed in January 1946, was suddenly withdrawn and all sets which were to be repaired were taken away. An order for three radio broadcasting stations was withdrawn by the SMA because of lack of material and skilled labor.
